EDUCATION

BML Munjal University, Gurugram, India

Aug 2023 - May 2027

Bachelor of Technology in Computer Science and Engineering

CGPA: 8.0 / 10.0 | Coursework: Operating Systems, Computer Networks, DBMS, Data Structures and Algorithms

EXPERIENCE

Freelance Cloud and DevOps Engineer

Jan 2025 - Present

- Built a Kubernetes self-healing system across 15+ microservices using automated pod restart policies and liveness/readiness probes, reducing mean time to recovery (MTTR) by approximately **60%**
- Deployed full observability stack with Prometheus for metrics scraping, Grafana for dashboards, and Loki for log aggregation; configured alerting rules on CPU, memory, pod restarts, and error rates
- Deployed Dockerized applications on AWS EC2 with Nginx reverse proxy, SSL/TLS via Certbot, and automated container restart policies, designed for resilience and predictable recovery from failures
- Tuned alert thresholds based on real incident patterns to reduce noisy pages without missing actual failures; documented incident response procedures and runbooks

Signity Software Solutions Pvt. Ltd., SDE Intern

Jun 2024 - Jan 2025

- Shipped 10+ frontend features in React and TypeScript on a client-facing web application through Agile sprints
- Optimized GitHub Actions CI/CD pipelines, reducing build and deploy time from **12 minutes to 7 minutes** via parallelization and dependency caching

PROJECTS

AutoFixOps - Self-Healing Framework for Kubernetes

github.com/vanshitahuja/Auto_fix_Ops

Python, FastAPI, Prometheus, Kubernetes, Qdrant, LangChain, React, PostgreSQL

- Ingests Prometheus alerts and classifies Kubernetes incidents through a two-tier engine (deterministic rules first, LLM fallback), opening GitHub Pull Requests for engineer review before any production change
- Built a Retrieval-Augmented Generation (RAG) layer using Qdrant vector embeddings to surface similar prior incidents; validated all LLM-generated actions against Pydantic schemas with a 0.80 confidence threshold
- Implemented 11 defense-in-depth safety controls including action allowlist, circuit breaker, anti-thrashing gates, and Fernet-encrypted token storage for secure automation

FaultLine - Chaos Engineering Platform

github.com/vanshitahuja/FaultLine | Docker Hub

Docker, Docker Compose, Node.js, Express, React

- Built 8+ fault-injection scenarios (CPU stress, memory leaks, network latency, container crashes) with configurable blast radius and automated rollback; Docker image received **150+ pulls** on Docker Hub in the first month

ApplyOps - Job Application Tracking Platform

apply-ops.vercel.app | GitHub

Node.js, PostgreSQL, WebSockets, Google APIs, OAuth 2.0

- Built a real-time tracking dashboard over WebSockets backed by PostgreSQL; optimized indexes on frequently queried tables to keep response times **under 100ms**
- Integrated Gmail and Google Calendar APIs over OAuth 2.0 with proper token refresh, scope management, and revocation handling

TECHNICAL SKILLS

Observability and SRE: Prometheus, Grafana, Loki, AWS CloudWatch, alerting rules, dashboards, log aggregation, SLI/SLO, incident response, runbooks, chaos engineering, MTTR reduction, alert tuning

Cloud Platforms: AWS (EC2, S3, IAM, CloudWatch), Google Cloud Platform (Cloud Run, GKE), Microsoft Azure (basics)

Containers and Orchestration: Docker, Docker Compose, Kubernetes, Helm

Languages and Scripting: Python, Bash, JavaScript, TypeScript, Java, SQL

Backend and Data: Node.js, Express, FastAPI, REST APIs, WebSockets, PostgreSQL, MySQL, MongoDB, Redis, Kafka, Qdrant

CI/CD and Security: GitHub Actions, Git, Nginx, Linux, OAuth 2.0, JWT, IAM policies, encrypted secrets, SSL/TLS

CERTIFICATIONS

Google Cloud Professional Certification - cloud infrastructure, SRE practices, operational excellence

IBM DevOps Professional Certification - CI/CD pipelines, automation, Agile methodology
